Software Engineer

Professional Summary

Software engineer and MSc Cloud Computing student at National College of Ireland with hands-on experience building cloud-native applications, designing CI/CD pipelines, and developing full-stack solutions. Proficient in Python, AWS, Docker, Kubernetes, and modern DevOps practices. Currently delivering containerised microservices and automated deployment systems, with strong software engineering fundamentals and version control expertise.

Technical Skills

Programming Languages:	Python, Bash, SQL, JavaScript
Cloud Platforms:	AWS (EC2, S3, IAM, CloudFormation, CloudWatch)
Containers & Orchestration:	Docker, Kubernetes
CI/CD & Automation:	GitHub Actions, Jenkins
Infrastructure as Code:	Terraform, YAML
Web & APIs:	RESTful APIs, HTML, CSS
Databases:	SQL, PostgreSQL
Version Control:	Git, GitHub
Monitoring & Logging:	Prometheus, Grafana
Operating Systems:	Linux, Windows
IDE / Tools:	VS Code, Postman

Professional Experience

National College of Ireland (NCI), Dublin. Sep 2025 – Present

Graduate Programme Projects — MSc Cloud Computing

Project Description: Designed and implemented cloud-native applications with containerisation, CI/CD automation, and AWS deployments as part of MSc coursework.

Responsibilities:

- Developed and deployed cloud-hosted services using AWS EC2, S3, IAM, and CloudFormation
- Built and managed Docker containers and Kubernetes deployments for microservice workloads
- Designed automated GitHub Actions pipelines for build, test, and deployment workflows
- Provisioned infrastructure using Terraform and Kubernetes YAML manifests
- Implemented monitoring and logging for containers using Prometheus and Grafana

Environment: AWS, Docker, Kubernetes, GitHub Actions, Terraform, Python, Linux, YAML

Projects

Personal AI Assistant — Telegram Bot 2025 – Present

Personal Project | github.com/Jaipalreddy2/personal-assistant

Project Description: Built a 24/7 AI-powered Telegram bot integrating multiple APIs with automated job application pipeline and intelligent resume tailoring.

Responsibilities:

- Engineered automated LinkedIn Easy Apply pipeline using Playwright to search, filter, and apply to 60+ roles
- Integrated Gmail IMAP for real-time priority email monitoring with smart alerts
- Connected Google Calendar OAuth for scheduling, event creation, and daily briefings
- Built Claude AI resume tailoring module that rewrites bullet points to match job descriptions

- Deployed on Windows with persistent background process management and auto-restart capability

Environment: Python, Claude AI API, Playwright, Telegram Bot API, Gmail IMAP, Google Calendar API, SQLite, Git

CI/CD Pipeline — Python App Deployment to AWS EC2

2025

Personal Project | github.com/Jaipalreddy2/cicd_project1

Project Description: Implemented fully automated CI/CD pipeline using GitHub Actions to deploy Python web application to AWS EC2 with zero manual steps.

Responsibilities:

- Configured GitHub Actions workflow triggered automatically on every push to main branch
- Pipeline SSHs into AWS EC2, pulls latest code, installs dependencies, and restarts Gunicorn server
- Used GitHub Secrets for secure SSH key and credential management, eliminating password-based access
- Documented deployment processes and wrote reusable YAML workflow configuration

Environment: GitHub Actions, AWS EC2, Python, Gunicorn, SSH, Git, Linux, YAML

Education

MSc Cloud Computing, National College of Ireland, Dublin (2026–2027)

B.Tech, CMR Institute of Technology, Hyderabad, India (2020–2024)
